Engineering manager with 13+ years of experience in iOS engineering, including several years leading and managing engineers and teams. Throughout my career, I have had the opportunity to work with a variety of organisations, from agile start-ups to well-established businesses, **building extensive domain knowledge within fintech**, particularly across savings and investments, payments and financial services.

My experience has evolved from hands-on iOS development into **engineering leadership and management**, with responsibility for people progression, career development, team structure and delivery across multiple product squads. I remain closely involved in technical strategy and architecture, while working across **Product, Design and Engineering** to help teams deliver effectively. I also have a strong design background, with particular experience around Design Systems and creating consistent, scalable product experiences.

Professional Experience

iOS Senior Engineering Lead, Moneybox 01/2021 – Present | London, UK

- Manage engineers across the iOS team and multiple product squads, with responsibility for people management, career development, team structure and delivery.
- Develop engineers across different levels through regular coaching, feedback and career support, with multiple team members progressing into senior roles.
- Lead cross-squad collaboration across complex initiatives, working closely with Product, Design, Backend and Engineering stakeholders from early shaping and technical planning through to delivery.
- Drive technical strategy and architectural decisions across iOS, balancing product delivery with scalability, maintainability and the long-term evolution of the application.
- Champion the adoption and evolution of Shared Systems, including Contentful-driven experiences and Server-Driven UI, enabling teams to build more scalable, consistent and configurable product experiences.
- Lead and support the adoption of AI-assisted engineering practices, introducing project-specific AI skills and product domain knowledge, and using MCPs and AI-assisted workflows across shaping and development.
- Introduced and championed improvements to unit testing practices, significantly increasing code coverage and strengthening long-term code reliability.

Senior iOS Developer, WorldRemit 03/2020 – 01/2021 | London, UK

- Worked on the development and modernisation of the iOS application as part of the iOS Chapter, including new customer experiences and a currency conversion widget.
- Contributed to iOS development standards and engineering guidelines while collaborating with cross-functional teams on the redesign and evolution of the application.

iOS Developer, Tide 01/2019 – 03/2020 | London, UK

- Designed and implemented receipt and transaction matching functionality, enabling business customers to maintain digital receipts alongside their transactions.
- Worked closely with Product Managers and cross-functional teams to define features, shape technical solutions and plan development cycles.

iOS and macOS Developer, Secure Broadcast 07/2017 – 01/2019 | Belfast, UK

iOS Developer and UX Designer, GoConqr 03/2016 – 07/2017 | Belfast, UK

iOS Developer, R7.com 06/2015 – 01/2016 | São Paulo, Brazil

iOS Developer, Minha Vida 06/2014 – 05/2015 | São Paulo, Brazil

Junior iOS Developer, Digisa Digital 05/2013 – 06/2014 | São Paulo, Brazil

Skills

Leadership
Engineering Leadership · People Management and Development · Technical Strategy · Delivery Leadership · Technical Mentoring

Engineering
iOS Development · Swift · SwiftUI · UIKit · Software Architecture · Unit Testing · CI/CD

Systems & AI
Shared Systems · Server-Driven UI · Contentful · AI-assisted Engineering · AI Tooling & MCPs

Design
Design Systems · UX · Product Design · Figma · Design & Engineering Collaboration

Education

System Analysis and Development 2012 – 2014 | São Paulo, Brazil
Universidade Anhembi Morumbi

Projects

WOut - Weekly Workouts 2025 – Present
Native iOS fitness app built with SwiftUI, SwiftData and MVVM, using an offline-first architecture with iCloud and HealthKit integration. Uses Foundation Models and Apple Intelligence for private, on-device workout generation.

Guitar Input Monitor 2026 – Present
Native macOS application for ultra-low-latency audio monitoring, built with Core Audio and supporting real-time audio processing, configurable buffer sizes, chromatic tuning and multi-channel input.

LearnLoop - iOS Mentorship Project 2025 – Present
Mentoring a junior iOS developer through the development of a flashcard application, providing guidance on architecture, code quality, testing, design and code reviews, with a focus on developing engineering independence and best practices.
